SNMP Interface Specification
for PNMSj
iPASOLINK 400

NEC Corporation
Copyright © 2014

CONTENTS

1   Introduction

This document describes in detail the interface between the PNMS and the higher-level manager for iPASOLINK 400 radio equipment. This describes the iPASOLINK 400 MIB explanation. The general description of PNMS SNMP interface such as hardware configuration, communication protocol, interface function and PNMS MIB of summary status (Group (cluster) status and NE status) are described in "PNMS SNMP Interface Specification".
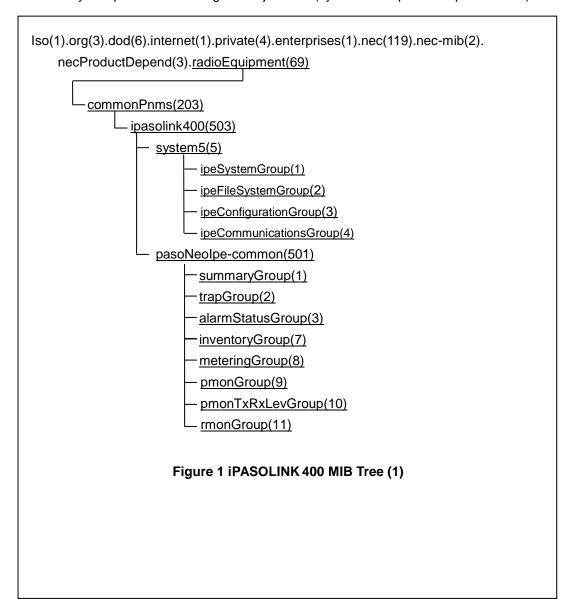

NEC provides MIB information. The integration work to higher-level management system will be performed by the customer.

2 iPASOLINK 400 MIB

This section describes in detail iPASOLINK 400 MIB. The objective of this section is to show MIB definition of IPASOLINK 400 equipment for the higher-level manager and its collection of Trap names and Trap numbers.

For fully detailed MIB definitions, please refer to respective Appendices attached to the latter part of this manual.

The MIB tree is shown in Figure 1. The first seven entries are NEC assigned MIB objects. The Management Information Base (MIB) of IPASOLINK 400 equipment for the higher-level manager is mainly comprised of following two object ID's (system5 and pasoNeoIpe-common).

Iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).nec(119).nec-mib(2).
    necProductDepend(3).radioEquipment(69)

                commonPnms(203)
                    ipasolink400(503)
                        system5(5)
                            ipeSystemGroup(1)
                            ipeFileSystemGroup(2)
                            ipeConfigurationGroup(3)
                            ipeCommunicationsGroup(4)
                        pasoNeoIpe-common(501)
                            summaryGroup(1)

                            rmonGroup(11)

Figure 1 iPASOLINK 400 MIB Tree (1)

2.1 system5

This group includes the system information of the detailed MIB object of iPASOLINK 400 equipment.

Following is a detailed list of system5 which is supported by upper SNMP function of iPASOLINK 400. Please refer to appendix for further details with regards to each file name shown in the list.

File Name	Table Name

2.1.1 ipeSystemGroup

The object ID's in this group defines summary (total) status of agent (PASOLINK NE) as follows.
For more detailed information on "ifindex", please refer to appendix.

ipeSysInfoTable

Object Name	Item	Trap Type
ipeSysInfoIndex	The value is fixed at 1.	-
ipeSysInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeSysNeName	Equipment name (for display).	-
ipeSysAreaName	Area name (for display).	-
ipeSysNote	Memorandum (for display).	-
ipeSysPrimaryIpAddress	Primary IP Address (for display and setting).	-
ipeSysSubnetMask	Subnet mask (for display).	-
ipeSysDefaultGateway	Default gateway (for display).	-
ipeSysMacAddress	MAC address (for display).	-
ipeSysMibVersion	MIB version.	-
ipeSysEquipmentType	Equipment type. 20: PASOLINK+(STM-1) 30:PASOLINK+(STM-0) 40:PASOLINK+(PDH) 50:PASOLINK+(Nlite-L) 60:PASOLINK+(Mx) 70:PASOLINK+(Nlite-Lx) 100:PASOLINK NEO(STD) 110:PASOLINK NEO(N+1) 120:PASOLINK NEO(advanced) 130:PASOLINK NEO(Compact) 140:PASOLINK NEO(NODAL) 150:PASOLINK NEO(HP) 160:NLiteNEO 200:iPASOLINK 200 201:iPASOLINK 100 321:iPASOLINK 100E 400:iPASOLINK 400 450:iPASOLINK 400A 501-502:iPASOLINK SX 520:iPASOLINK EX 1000:iPASOLINK 1000 5000:5000iP Series	-
ipeSysPmType	Number of Branch. 2-13. 1=normalNE mode. 1!=branchNE mode (2<= ipeSysPmType <= 20).	-

ipeSysOpTimeTable

Object Name	Item	Trap Type
ipeSysOpTimeIndex	The value is fixed at 1.	-
ipeSysOpTimeNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeSysOpCurrentTime	Current time.	Control

ipeSysOperationGroup   ipeSysOpFileDownloadTable

Object Name	Item	Trap Type
ipeSysOpFileDownloadIndex	The value is fixed at 1.	-
ipeSysOpFileDownloadNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeSysOpFileDownloadModule	Program type. 0:Invalid 1:IDU 2:ODU 3:MODEM Parameter 4:FPGA (Option) 5:FPGA (Main Board) 7:Software Key 8:Network Config. 9:Equipment Config. 10:User Config. 11:SSL Certificate 18:F/W (Option) *'0:Invalidity' is used as an initial state.	Status
ipeSysOpFileDownloadCpuResetDetail	CPU reset control. 0:Invalidity 1:revert reset 2:normal reset(without revert) *'0:Invalidity' is used as an initial state.	Control
ipeSysOpFileDownloadStatus	Download result. 0:Invalidity 1:Completed 2:Failed 3:Executing 4:Suspending *'0:Invalidity' is used as an initial state. *A change state is the following three kinds. 1)When it operates normally:(Start)->(3:Executing)->(1:Completed) 2)When it cancels on the way:(Start)->(3:Executing)->(4:Suspending)->(Completed) 3)When unusual detection is carried out on the way:(Start)-> (3:Executing)->(2:Failed) *The download start from excluding (3:Executing) is permitted. *The download start from (3:Executing) is not permitted. *Pertinent details: ipeSysOpFileDownloadCtrl	Status
ipeSysOpFileDownloadCtrl	Download control. 0:Invalidity 1:Download start 2:Download suspend 3:Upload start 4:Upload end 5:Download reset *'0:Invalidity' is used as an initial state. *'5:Download reset' terminates the FTP server(vsftpd) with the deletion processing in the type of the file for all download directory.	Status

| | *The object file name allows only alphanumeric character '0-9', 'a-z', 'A-Z' of ASCII code, and sign '-_.+'.

 *Pertinent details: ipeSysOpFileDownloadProtocolType
 *Pertinent details: ipeSysOpFileDownloadModule
 *Pertinent details: ipeSysOpFileDownloadStatus
 *Pertinent details: ipeFsUpdateFileStatus
 *Pertinent details: ipeFsUsbProcStatus

 [Race condition]
 *When ipeSysOpFileDownloadStatus is (3:Executing) or (4:Suspending), (1:Download start) is invalid.
 *When ipeSysOpFileDownloadStatus is (4:Suspending), (2:Download suspend) is invalid.
 *When ipeSysOpFileDownloadStatus is (0:Invalidity), (1:Download start) is valid, but do nothing.
 *When ipeFsUpdateFileStatusis(3:Executing), it is invalid. Other one is valid.
 *When ipeFsUsbProcStatus is (2:Normal:Process executing), it is invalid. Other one is valid.

 [Indispensable condition]
 *When it is (1:Download start) or (3:Upload start), (4:Upload end), ipeSysOpFileDownloadProtocolType setup is indispensable. | |
| ipeSysOpFileDownloadProtocolType | Kind of protocol,

 0: Invalid
 1: FTP
 2: SFTP
 3: HTTP

 *'0:Invalidity' is used as an initial state.

 *Pertinent details: ipeSysOpFileDownloadCtrl | Status |

ipeSysOperationGroup   ipeSysOpProgramPmonRmonClearTable

Object Name	Item	Trap Type
ipeSysOpProgramPmonRmonClearIndex	The value is fixed at 1.	-
ipeSysOpProgramPmonRmonClearNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeSysOpProgramPmonRmonClear	PMON data clear control 0:FIXED VALUE 1:REQUEST	Control
ipeSysOpProgramPmonRmonClearResult	PMON data clear control response 1:COMPLETED 2:FAILED 3:EXECUTING	Status

2.1.2   ipeFileSystemGroup

For more detailed information on "ifindex", please refer to appendix.

ipeFsFileInfoTable

Object Name	Item	Trap Type
ipeFsFileInfoIndex	The value is fixed at 1.	-
ipeFsFileInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeFsFileListType	Type for acquisition 0:Invalidity 1: IDU 2: ODU 3: MODEM Parameter 4: FPGA(Other slot) 5: FPGA(Ctrl) 6: MSE 7: Software Key License 8: Network Config 9: Equipment Config 10: User Config 11: Server Certificate for HTTPS/HTTPS certificate issue request 12: PMON data 13: RMON data 14: Command/event/alarm LOG 15: Device Inventory file 16: MAC learning entry 17: all(All types) 18: Card Firmware *'0:Invalidity' is used as an initial state. *Pertinent details: ipeFsFileListCurrent *Pertinent details: ipeFsFileListTemp	-
ipeFsFileListCurrent	Current file list (Flash-ROM). The list of the type set to ipeFsFileListType is acquired. Form of file list: It's 1 item by 'file name (It included in a path), file size,CRC'. Each item is divided at space. Ex) FilePath1/FileName1,size,CRC FilePath2/FileName2,size,CRC... [Indispensable condition] *ipeFsFileListType setup is indispensable.	-
ipeFsFileListTemp	Temporary file list (DRAM). The list of the type set to ipeFsFileListType is acquired. Form of file list: It's 1 item by 'file name (It isn't included in a pass),file size,CRC'. Each item is divided at space. Ex) Filename1,size,CRC Filename2,size,CRC...	-

	[Indispensable condition] *ipeFsFileListType setup is indispensable.	
ipeFsUpdateFileDetail	File update control. Thing to specify object file after it downloads it by 'ipeSysOpFileDownloadCtrl','ipeFsUsbCommand' and to demand file update. Ex) Filename1 *The object file name allows only alphanumeric character '0-9', 'a-z', 'A-Z' of ASCII code, and sign '-_.+'. *Pertinent details: ipeSysOpFileDownloadModule *Pertinent details: ipeFsUpdateFileUpdateList *Pertinent details: ipeSysOpFileDownloadStatus *Pertinent details: ipeFsUpdateFileStatus *Pertinent details: ipeFsUsbProcStatus [Race condition] *When ipeSysOpFileDownloadStatus is (3:Executing) or (4:Suspending), it is invalid. *When ipeFsUpdateFileStatusis(3:Executing), it is invalid. *When ipeFsUsbProcStatus is (2:Normal :Process executing), it is invalid. [Indispensable condition] *When ipeSysOpFileDownloadModule is 'odu(2)', 'mdprm(3)', or 'raFpga(4)', ipeFsUpdateFileUpdateList setup is indispensable.	Control
ipeFsUpdateFileStatus	Update result. 0:Invalidity 1:Success 2:Failed 3:Executing 4:Checking 5:Success without Restricted User *'0:Invalidity' is used as an initial state. *The slot result of the correspondence is set to 'IpeFsUpdateFileStatusDetail', and processing is continued when failing in the two or more slot update. *Pertinent details: ipeFsUpdateFileDetail *Pertinent details: ipeFsUpdateFileStatusDetail	Status

ipeFsUpdateFileStatusDetail	Update result is detailed.
	
	OCT: Update result of each slot
	    1: Completed
	    2: Failed
	
	The slot for which the current state is used becomes the following.
	
	OCT[0] : Main Card
	OCT[1] : Universal Slot01 Card
	OCT[2] : Universal Slot02 Card
	OCT[3] : Universal Slot03 Card
		-

	OCT[4] : Universal Slot04 Card OCT[33]: ODU1 OCT[34]: ODU2 OCT[35]: ODU3 OCT[36]: ODU4 *Pertinent details: ipeSysOpFileDownloadCtrl *Pertinent details: ipeFsUpdateFileDetail *Pertinent details: ipeFsUsbCommand	
ipeFsUpdateFileProgressBase	Progress of update (denominator). *Pertinent details: ipeSysOpFileDownloadModule *Pertinent details: ipeFsUpdateFileStatus	-
ipeFsUpdateFileProgress	Progress of update (molecule). *Pertinent details: ipeSysOpFileDownloadModule *Pertinent details: ipeFsUpdateFileStatus	-
ipeFsUpdateFileUpdateList	Definition of update slot number. Form of file list: When downloading it to ODU/FPGA/MDPRM, the forwarding site slot number is enumerated by a comma end. Ex) 0,5,1,6,10... The slot number of relating MODEM and fpga must set the slot number of Option Card to odu and mdprm according to inventory information. The slot number to which the current state can be set becomes the following. 1 : Universal Slot01 Card 2 : Universal Slot02 Card 3 : Universal Slot03 Card 4 : Universal Slot04 Card 33: ODU1 34: ODU2 35: ODU3 36: ODU4 *Pertinent details: ipeFsUpdateFileDetail	-
ipeFsUpdateFileConfigPartial	Specify Equipment Configuration Partial Download pattern.If this object is set with ipeFsUpdateFileDetail, the system will perform the partial download, otherwise the system will perform the normal download. And Partial Download is performed only when Equipment Configuration Dowload. SYNTAX is 32bit string. The definition of each bit is shown below. - bit1-4: specify download mode. 0001 : normal mode other value : reserved (system rejects the request) - bit5-32: specify the equipment config part. Setting 1 to each bit means corresponding config download is activated. Bit5 : Equipment Configuration (must set when	Control

the normal mode)
  Bit6 : Radio Configuration
  Bit7 : Radio Configuration w/o Radio Frequency
        Bit6 and Bit7 cannot be set to 1
simultaneously.
  Bit8 : E1/STM1 Mapping (must set when Bit6 or
Bit7 is activated)
  Bit9 : MODEM Function setting
  Bit10: ETH Function setting
  Bit11: E1/STM1/Cross Connect Setting
  Bit12: PWE Setting
  Bit13: Equipment Clock/Synchronization Setting
  Bit14: Relay-Alarm Mapping
  Bit15: V11/OW Setting
  Bit16: Alarm/AIS Setting
  Bit17: PMON/RMON Setting
  Bit18: AUX Setting
  other: reserved (don't care)

Example)
 the pattern of downloading the equipment
configuration, radio configuration, E1/STM1
mapping, ETH Function Setting on normal mode.
  ipeFsUpdateFileConfigPartial =
'0001110101000000000000000000000000'

ipeFsUsbInfoTable

Object Name	Item	Trap Type
ipeFsUsbInfoIndex	The value is fixed at 1.	-
ipeFsUsbInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-

ipeFsUsbCommand	USB control mode/USB file path/Program type specification.
	
	  [Mode],[Arg1],[Type]
	    Mode:USB control mode
	     0:DL, 1:UL
	    Arg1:object file path -1 (original file path (path from a chroot subordinate) When DL: Inside of USB, When UL: Inside of IPE)
	      Case of DL: Ex.) idu/iPASOLINK200-idufw-v1.00.XX.bin
	      Case of UL: Ex.) export/config/iPASOLINK-network.cfg
	    Type:Program type
	      The program type set to 'ipeSysOpFileDownloadModule' is specified.
	       *The unsetting is allowed for an arbitrary, set item.
	
	      0: Invalid
	      1: IDU F/W
	      2: ODU F/W
	      3: MODEM Parameter
	      4: FPGA(Option Card)
	      5: FPGA(Main Card)
	      6: MSE Card F/W
	      7: Software License Key
	      8: Network Config
	      9: Equipment Config
	     10: User Config
	     11: HTTPS Server Certificate
		-

	*The object file name allows only alphanumeric character '0-9', 'a-z', 'A-Z' of ASCII code, and sign '-_.+'. *Pertinent details: ipeSysOpFileDownloadModule *Pertinent details: ipeSysOpFileDownloadStatus *Pertinent details: ipeFsUpdateFileStatus *Pertinent details: ipeFsUsbProcStatus [Race condition] *When ipeSysOpFileDownloadStatus is (3:Executing) or (4:Suspending), (0:DL) is invalid. *When ipeFsUpdateFileStatusis (3:Executing), (0:DL) is invalid. *When ipeFsUsbProcStatus is (2:Normal :Process executing), (0:DL) is invalid.	

ipeFsUsbProcStatus	Status of USB memory control result.
	
	The classification of a setting value and the meaning are as follows.
	  0:Invalidity
	  1:NORMAL:Normal end
	  2:NORMAL:Executing
	 98:ERROR:The lack of free space on disk or media
	 99:ERROR:File/directory not found
	101:ERROR:The kind of designated files,the size, contents, etc. are unjust
	102:ERROR:Media aren't inserted
	103:ERROR:Media access error (ex:unjust format)
	127:ERROR:Undefined error (other errors)
	When having a control instruction, it's made '2:Executing'.
	
	*'0:Invalidity' is used as an initial state.
	
	*Pertinent details: ipeFsUsbCommand
		Status

ipeFsUsbList	File list format. Form of file list: It's 1 item by 'file name (path from a chroot subordinate),file size,CRC'. Each item is divided at space. *CRC is fixed '0'. Ex) FilePath1/FileName1,size,CRC FilePath2/FileName2,size,CRC...	-
ipeFsUsbConnectStatus	Status of connection USB memory. 1:Connect 2:Not connect	Status

2.1.3 ipeConfigurationGroup

For more detailed information on "ifindex", please refer to appendix.

ipeCfgSystemTable

Object Name	Item	Trap Type
ipeCfgSystemIndex	The value is fixed at 1.	-
ipeCfgSystemNEAddress	PASOLINK NE IP Address (used as index of this table)	-
ipeCfgNeName	NE Name PASOLINK unit name. White space characters are not allowed for head or tail of characters.	Control

ipeCfgAuxInTable

Object Name	Item	Trap Type
ipeCfgAuxInIndex	1-6	-
ipeCfgAuxInNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgAuxInItemName	Item Name (Input-x) (x : 1-6)	-
ipeCfgAuxInItemType	Alarm Type 1: Alarm In Open 2: Alarm In Close 3: Status	-
ipeCfgAuxInOpenState	String indicated when AUX Input is Open. ASCII 32bytes	-
ipeCfgAuxInCloseState	String indicated when AUX Input is Close. ASCII 32bytes	-
ipeCfgAuxInSeverity	String (severity) indicated when AUX Input is ALARM. 0:Invalid 1:Critical 2:Major 3:Minor 4:Warning	-
ipeCfgAuxInAlarmType	String (AlarmType) indicated when AUX Input is ALARM.	-
ipeCfgAuxInProbableCause	String (ProbableCause) indicated when AUX Input is ALARM.	-

ipeCfgAuxOutTable

Object Name	Item	Trap Type
ipeCfgAuxOutIndex	1-4	-
ipeCfgAuxOutNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgAuxOutItemName	Item Name (Output-x) (x : 1-4)	-
ipeCfgAuxOutOpenState	String indicated when AUX Output is Open.	-
ipeCfgAuxOutCloseState	String indicated when AUX Output is Close.	-

ipeCfgNtpServiceTable

Object Name	Item	Trap Type
ipeCfgNtpServiceIndex	The value is fixed at 1.	-
ipeCfgNtpServiceNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgNtpServiceEnable	NTP control enable. 0:Invalid 1:Disabled 2:Enabled	Control
ipeCfgNtpServerMode	NTP server mode. 0:Invalid 1:unicast 2:multicast 3:disabled	Control
ipeCfgNtpClientMode	NTP client mode. 0:Invalid 1:unicast 2:multicast 3:disabled	Control
ipeCfgNtpServerStratum	NTP Stratum. 2-15	Control
ipeCfgNtpServerMulticastPort	NTP server multicast port. (IfIndex value of bridge port)	Control
ipeCfgNtpServerMulticastIntervalTime	Value of NTP multicast polling time. Set in powers of 2. (Range from 4: 16sec – 17: 36H (Default = 6: 64sec))	Control

ipeCfgNtpServerTable

Object Name	Item	Trap Type
ipeCfgNtpServerIndex	1-4	-
ipeCfgNtpServerNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgNtpServerAddress	IP Address of NTP server.	Control
ipeCfgNtpVersion	Version of supported NTP message.	Control
ipeCfgNtpPollTime	Poll Time NTP Polling Time, in seconds as a power of two. For instance, a value of six indicates a interval of 64 seconds. Note) The value less than 6 is rejected by the agent because of the system recommendation. iPASOLINK 200/400/1000 series : R3.5 or later. iPASOLINK AOR : R1.0 or later. 0:Invalid 4:16s 5:32s 6:1min 4s (64s) 7:2min 8s (128s) 8:4min 16s (256s)	Control

ipeCfgFtpServerTable

Object Name	Item	Trap Type
ipeCfgFtpServerIndex	The value is fixed at 1.	-
ipeCfgFtpServerNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgFtpServerEnable	FTP control enable. 0:Invalid 1:Service Disable 2:Service Enable 3:Always Enable	Control
ipeCfgFtpServerCommandTcpPort	Port number of FTP command. 1-65535	Control
ipeCfgFtpServerDataTcpPort	Port number of FTP data transfer. 1-65535	Control
ipeCfgFtpServerMaxSession	Number of max connections. 1-3	Control
ipeCfgFtpServerAutoDisable	FTP automatic stop control enable. 0:Invalid 1:Disabled 2:Enabled	Control

ipeConfigurationGroup   ipeCfgSftp   ipeCfgSftpServerTable

Object Name	Item	Trap Type
ipeCfgSftpServerIndex	The value is fixed at 1.	-
ipeCfgSftpServerNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgSftpServerEnable	Https server enable. 0:Invalid 1:ServiceDisable 2:ServiceEnable 3:AlwaysEnable	Control
ipeCfgSftpServerAutoDisable	SFTP automatic stop control enable. 0:Invalid 1:Disabled 2:Enabled	Control

ipeCfgHttpServerTable

Object Name	Item	Trap Type
ipeCfgHttpServerIndex	The value is fixed at 1.	-
ipeCfgHttpServerNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgHttpServerEnable	HTTP control enable.	-

	0:Invalid 1:Disabled 2:Enabled	
ipeCfgHttpServerTcpPort	Port number of HTTP. 1-65535	-

ipeCfgHttpsServerTable

Object Name	Item	Trap Type
ipeCfgHttpsServerIndex	The value is fixed at 1.	-
ipeCfgHttpsServerNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgHttpsServerEnable	HTTPS control enable. 0:Invalid 1:Disabled 2:Enabled	Control
ipeCfgHttpsServerTcpPort	TCP port number of HTTPS. 1-65535	Control

ipeCfgSnmpServerTable

Object Name	Item	Trap Type
ipeCfgSnmpServerIndex	The value is fixed at 1.	-
ipeCfgSnmpServerNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgSnmpV1V2cEnable	Indicates the SNMP entity is permitted to receive & process SNMPv1/v2c PDU or is not permitted to do. Even if it is disabled, SNMPv1/v2c Traps is sent. 0:Invalid 1:Disabled 2:Enabled	-
ipeCfgSnmpV3Enable	Indicates the SNMP entity is permitted to receive & process SNMPv3 PDU or is not permitted to do. Even if it is disabled, SNMPv3 Traps is sent. 0:Invalid 1:Disabled 2:Enabled	-
ipeCfgSnmpServerPort	A UDP port number to receive all SNMP Request-PDU. The reboot of the system is necessary to reflect setting. 1-65535	-

ipeCfgSnmpCommunityTable

Object Name	Item	Trap Type
ipeCfgSnmpCommunityIndex	The value is fixed at 1.	-
ipeCfgSnmpCommunityNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgSnmpCommunityName	This entity's community name. Please use ASCII code. Set within 31 bytes. The characters which can be used are '-', '_','0'-'9', 'a'-'z' and 'A'-'Z'.	Control
ipeCfgSnmpCommunityAccessLevel	A access level of a connection using this entry's community name. 0:Invalid 1:Operator Level 2:Config Level 3:Admin Level	Control
ipeCfgSnmpCommunityAccessAddress	An IP Address which is permitted to use this entry's community name. The following address can't be used.	Control

	127.0.0.0/8 Loopback 224.0.0.0/4 Multicasts (former Class D) 240.0.0.0/4 Reserved (former Class E)	
ipeCfgSnmpCommunityAccessPrefixLength	1:active 4:createAndGo 6:destroy This RowStatus has a status only active(1). You can SET only createAndGo(4) or Destroy(6). 1) how to create To create a new row, you must SET objects indicated below. ipeCfgSnmpCommunityName ipeCfgSnmpCommunityAccessLevel ipeCfgSnmpCommunityAccessAddress ipeCfgSnmpCommunityAccessMask ipeCfgSnmpCommunityRowStatus <- createAndGo(4) ipeCfgSnmpCommunityIndex is an index of this entry. 2) how to destroy To destroy a exist row, you must SET a destory(6) to ipeCfgSnmpCommunityRowStatus. 3) how to modify It is not possible. Please destroy a exist row, and create a new row. < Attention > You have to restart equipment to apply this entry(creating, deleting) to actual movement.	Control

ipeCfgSnmpTrapTable

Object Name	Item	Trap Type
ipeCfgSnmpTrapEntryIndex	The value is fixed at 1.	-
ipeCfgSnmpTrapEntryNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgSnmpTrapVersion	A version of this entry's notification. 0: Invalid 1: v1 2: v2c 3: v3	Control
ipeCfgSnmpTrapNotifyType	A notification type of this entry's notification.	Control

	0: Invalid 1: trap 2: inform	
ipeCfgSnmpTrapTargetAddress	Destination IP address of this entry's notification. The following address can't be used. 127.0.0.0/8 Loopback 0.0.0.0/0 Current network 224.0.0.0/4 Multicasts (former Class D) 240.0.0.0/4 Reserved (former Class E)	Control
ipeCfgSnmpTrapTargetPort	Destination UDP port this entry's notification. 1-65535	Control
ipeCfgSnmpTrapSecurityName	A security name. The meaning is different depending on ipeCfgSnmpTrapVersion. v1/v2c : It's meaning a community name. v3 : It's meaning a user name. Please use ASCII code. The characters which can be used are '-', '_','0'-'9', 'a'-'z' and 'A'-'Z'. When there was the same combination to the other index, ipeCfgSnmpTrapSecurityName and ipeCfgSnmpTrapEngineId become error.	Control
ipeCfgSnmpTrapSecurityLevel	A security level of this entry's notification. When ipeCfgSnmpTrapVersion is v1(1) or v2c(2), you have to SET noAuthNoPriv(1). 0: Invalid 1: noAuthNoPriv 2: authNoPriv 3: authPriv	Control
ipeCfgSnmpTrapEngineId	A snmpEngineID which this entry's notification uses.(5-32 octet) ipeCfgSnmpTrapNotifyType is effective only at the time of inform(2). A snmpEngineID of a destination SNMP entity. When there was the same combination to the other index, ipeCfgSnmpTrapSecurityName and ipeCfgSnmpTrapEngineId become error.	Control
ipeCfgSnmpTrapAuthAlgorithm	Authentication protocol. 0: Invalid	Control

Object Name	Item	Trap Type
	1: md5 2: sha ipeCfgSnmpTrapNotifyType is effective for the SET only at the time of inform(2). Even if it is done SET in the case of trap(1), I am ignored. In addition, a value of ipeCfgAccountUserSnmpV3AuthAlgorithm is acquired at time to get.	
ipeCfgSnmpTrapAuthKey	Authenticate password(plane text) encrypted by blowfish. SIZE of SYNTAX is data length after the coding. SYNTAX after the decoding is DisplayString (SIZE(8..31)). ipeCfgSnmpTrapNotifyType is effective for the SET only at the time of inform(2). Even if it is done SET in the case of trap(1), I am ignored. In addition, a value of ipeCfgAccountUserSnmpV3AuthKey is acquired at time to get.	Control
ipeCfgSnmpTrapPrivAlgorithm	privacy protocol. ipeCfgSnmpTrapNotifyType is effective for the SET only at the time of inform(2). Even if it is done SET in the case of trap(1), I am ignored. In addition, a value of ipeCfgAccountUserSnmpV3PrivAlgorithm is acquired at time to get. 0: Invalid 1: des 2: aes	Control
ipeCfgSnmpTrapPrivKey	Privacy password(plane text) encrypted by blowfish. SIZE of SYNTAX is data length after the coding. SYNTAX after the decoding is DisplayString (SIZE(8..31)) . ipeCfgSnmpTrapNotifyType is effective for the SET only at the time of inform(2). Even if it is done SET in the case of trap(1), I am ignored. In addition, a value of ipeCfgAccountUserSnmpV3PrivKey is acquired at time to get.	Control

ipeCfgDhcpMainServerIndex	DHCP No. Range: 0..16	-
ipeCfgDhcpMainServerNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgDhcpMainServerEnable	DHCP Enabled 0:Invalid 1:Disabled 2:Enabled	Control
ipeCfgDhcpMainServerMode	DHCP Server / Relay Mode 0:Invalid 1:DHCP Server 2:DHCP Relay	Control
ipeCfgDhcpMainServerInterface	Bridge No. Interface Index. Slot Number +1 Range:2-5 Port Number 1:Port1 Path Number The value is fixed at 0.	Control
ipeCfgDhcpMainServerIpAddr	DHCP Server Address IpAddress	Control
ipeCfgDhcpMainServerLeaseTime	Lease Time Lease Time 0:Disabled Range:1-72[h]	Control
ipeCfgDhcpMainServerLeaseAddrRangeBegin	IP Address Range (Start) IpAddress	Control
ipeCfgDhcpMainServerLeaseAddrRangeEnd	IP Address Range (End) IpAddress	Control
ipeCfgDhcpMainServerLeaseAddrExcludeBegin	Exception (Start) IpAddress	Control
ipeCfgDhcpMainServerLeaseAddrExcludeEnd	Exception (End) IpAddress	Control
ipeCfgDhcpMainServerOptGatewayAddrEnable	Default Gateway Address Enable 0:Invalid 1:Same as Bridge Interface 2:Specify	Control

	3:Disabled	
ipeCfgDhcpMainServerOptGatewayAddr	Default Gateway Address IpAddress	Control
ipeCfgDhcpMainServerOptDnsServerPrimary	DNS Server Address (Primary) IpAddress	Control
ipeCfgDhcpMainServerOptDnsServerSecondary	DNS Server Address (Secondary) IpAddress	Control
ipeCfgDhcpMainServerOptSpecifyEnable	Other Option 0:Invalid 1:Disabled(Not Used) 2:Enabled(Used)	Control
ipeCfgDhcpMainServerOptSpecifyId	ID Range:0-255	Control
ipeCfgDhcpMainServerOptSpecifyType	Type 0:Invalid 1:IP Address 3:String 4:Octet String	Control
ipeCfgDhcpMainServerOptSpecifyValue	Value	Control
ipeCfgDhcpMainServerSecurityLevel	Security 0:Invalid 1:Any 2:Only Registered	Control
ipeCfgDhcpMainServerRegisteredMacId	DHCP No. Range:0-3	Control

ipeCfgDhcpGroup ipeCfgDhcpMainRegisteredMacTable

Object Name	Item	Trap Type
ipeCfgDhcpMainRegisteredMacId	DHCP No. Range:1-3	-
ipeCfgDhcpMainRegisteredMacNo	No. Range:1-256	-
ipeCfgDhcpMainRegisteredMacNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeCfgDhcpMainRegisteredMacAddr	MAC Address	Control
ipeCfgDhcpMainRegisteredMacIpAddr	IP Address 0.0.0.0:Auto 255.255.255.255:Rejected	Control
ipeCfgDhcpMainRegisteredMacRowStatus	RowStatus 0:Invalid 1:Active 4:CreateAndGo 6:Destoy	Control

2.1.4 ipeCommunicationsGroup

For more detailed information on "ifindex", please refer to appendix.

ipeCommunicationsGroup ipeNeighborInfoTable

Object Name	Item	Trap Type
ipeNeighborInfoIndex	Index of table.	-
ipeNeighborInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
ipeNeighborIpAddress	Neighbor NE is displayed as unit of registration every eight bytes of Internet Protocol address (4byte) + Node TYPE(4byte). The number of maximum registration is 30 (240byte). attention: ne2 set the IpAddress only, do not set the Node type.	Status

2.2 pasoNeoIpe-common

This group includes the information of the detailed MIB object of iPASOLINK 400 equipment.

Following is a detailed list of pasoNeoIpe-common which is supported by upper SNMP function of iPASOLINK 400. Please refer to appendix for further details with regards to each file name shown in the list.

File Name	Table Name

2.2.1   summaryGroup

The object ID's in this group defines summary (total) status of agent (iPASOLINK NE) as follows.

alarmSummaryGroup   alarmSummaryCommonInfoTable

Object Name	Item	Trap Type	Alarm Definition(X.733)	
			Alarm Type	Probable Cause
alarmSummaryCommonInfoIndex	The value is fixed at 1.	-	-	-
alarmSummaryCommonInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-	-	-
alarmTotalSummary	Total Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major (Default) 5:Minor 6:Warning This Object is the total summary of IDU, ODU, PMON(TCN), RMON(TCN) and AUX Input.	Alarm	-	-
alarmIduSummary	IDU Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning This object is the total summary of IDU(Slot) and Main Card.	Alarm	-	-
alarmCtrlSummary	Main Card Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-
alarmOduSummary	ODU Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-
alarmAuxInputSummary	AUX Input Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-
alarmPmonTcnSummary	PMON TCN Summary 0:Invalid	Alarm	-	-

Object Name	Item	Trap Type	Alarm Type	Probable Cause
	1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning			
alarmRmonTcnSummary	RMON TCN Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-
alarmRmonTcnCtrlSummary	RMON TCN Main Card Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-

alarmSummaryGroup   alarmSummaryIduSlotInfoTable

Object Name	Item	Trap Type	Alarm Definition(X.733)	
			Alarm Type	Probable Cause
alarmSummaryIduSlotInfoIndex	Slot Number +1 Range:1-8	-	-	-
alarmSummaryIduSlotInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-	-	-
alarmIduSlotSummary	IDU Slot Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-

alarmSummaryGroup   alarmSummaryIduSwGrpInfoTable

Object Name	Item	Trap Type	Alarm Definition(X.733)	
			Alarm Type	Probable Cause
alarmSummaryIduSwGrpInfoIndex	The value is fixed at 1.	-	-	-
alarmSummaryIduSwGrpInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-	-	-
alarmIduSwGrpSummary	IDU SW GRP Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-

alarmSummaryGroup   alarmSummaryOduInfoTable

Object Name	Item	Trap Type	Alarm Definition(X.733)	
			Alarm Type	Probable Cause
alarmSummaryOduInfoIndex	Slot Number +1 Range:2-5	-	-	-
alarmSummaryOduInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-	-	-
alarmOduEachSummary	ODU Each Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-

alarmSummaryGroup   alarmSummaryPmonTcnInfoTable

Object Name	Item	Trap Type	Alarm Definition(X.733)	
			Alarm Type	Probable Cause
alarmSummaryPmonTcnInfoIndex	Slot Number +1 Range:1-5	-	-	-
alarmSummaryPmonTcnInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-	-	-
alarmPmonTcnSlotSummary	PMON (TCN) Slot Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-

alarmSummaryGroup   alarmSummaryCtrlInfoTable

Object Name	Item	Trap Type	Alarm Definition(X.733)	
			Alarm Type	Probable Cause
alarmSummaryEoamInfoIndex	The value is fixed at 1.	-	-	-
alarmSummaryEoamInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-	-	-
alarmEoamSummary	ETH-OAM Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-
alarmRmonEoamSummary	RMON ETH-OAM Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-

alarmSummaryGroup   alarmSummaryRmonTcnInfoTable

Object Name	Item	Trap Type	Alarm Definition(X.733)	
			Alarm Type	Probable Cause
alarmSummaryRmonTcnInfoIndex	Slot Number +1 Range:1-5	-	-	-
alarmSummaryRmonTcnInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-	-	-
alarmRmonTcnSlotSummary	ETH-OAM Summary 0:Invalid 1:Cleared 2:Indeterminete 3:Critical 4:Major 5:Minor 6:Warning	Alarm	-	-

2.2.2 trapGroup

Trap can be classified into 3 different Traps: Alarm, Status or Control.With Status and Control, Trap notified can come in several different types. To decipher which form the Trap of the subjective Object came in, please look-up Description section of Appendix-3 to 12 where definitions are available.

Trap	Type
Alarm	alarmStateChange
Status	statusChange
	statusChangeDspStr
	statusChangeOctStr
	fileDownloadEvent
	fileUpdateEvent
Control	controlEvent
	controlEventDspStr
	controlEventOctStr
	controlEventUnsigned32

Please refer to chart below for further break down of Trap Type listed in the table above.

alarmStateChange

VARIABLES	Item
eventTotalCount	Total Counter Total trap count since system startup.
eventCount	Count The alarmStateChange trap count since system startup.
eventTime	Time Date and time when event occurred. When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Type Event type of trap. Alarm(1)
eventResourceID	OID OID setup. Object Identifier (OID) concerning this event.
eventSeverity	Severity Severity value. Ex) major = [4]
eventAlarmType	Alarm Type Alarm type of this alarm. The value is defined in CCITT Rec. X.733. See MIB Definition for detail values.
eventProbableCause	Probable Cause Probable cause of this alarm. The value is defined in CCITT Rec.X.733. See MIB Definition for detail values.
eventAdditionalText1	Additional Text1 Equipment type is defined here by additional texts. Value varies

	depending on equipment.
eventAdditionalText2	Additional Text2 NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3 Item Name of object shown in eventResourceID.
eventAdditionalText4	Additional Text4 "Alarm" (when alarm occurred) or "Normal" (when alarm cleared).
eventAdditionalText5	Additional Text5 Category Categorization of this event. Each category is divided by "|". - Category 1: Module / Function - Category 2: Card / Detail - Category 3: SW Grp / Slot - Category 4: Logical - Category 5: Type

When Alarm Trap is resent, Invalid(0) is set as the value for eventAlarmType and eventProbableCause.

Contents in above chart are applicable to those objects having "Alarm" in trap type column found within some of the other charts in this chapter. In my files, the syntaxes of those MIB objects are defined by severity values. Please refer to appendices for the set of my files.

statusChange

VARIABLES	Item
eventTotalCount	Total Counter Total trap count since system startup.
eventCount	Count The alarmStateChange trap count since system startup.
eventTime	Time Date and time when event occurred. When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Type Event type of trap. Status(2)
eventResourceID	OID setup. Object Identifier (OID) concerning this event.
eventStatusValue	Status Value(Integer) Status value is defined here by integers.
eventAdditionalText1	Additional Text1 Equipment type is defined here by additional texts. Value varies depending on equipment.
eventAdditionalText2	Additional Text2 NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3 Item Name of object shown in eventResourceID.

eventAdditionalText4	Additional Text4 Status value after status change in integer format.
eventAdditionalText5	Additional Text5 Category Categorization of this event. Each category is divided by "|". - Category 1: Module / Function - Category 2: Card / Detail - Category 3: SW Grp / Slot - Category 4: Logical - Category 5: Type

Contents in above chart are applicable to those objects having "Status" in trap type column found within some of the other charts in this chapter. In my files, the syntaxes of those MIB objects are defined by integers. Please refer to appendices for the set of my files.

statusChangeDspStr

VARIABLES	Item
eventTotalCount	Total Counter Total trap count since system startup.
eventCount	Count The statusChangeDspStr trap count since system up
eventTime	Time Date and time when event occurred. When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Type Event type of trap. Status(2)
eventResourceID	OID setup. Object Identifier (OID) concerning this event.
eventStatusValueDspStr	Status Value (Display String) Status value after status change in displayString format.
eventAdditionalText1	Additional Text1 Equipment type is defined here by additional texts. Value varies depending on equipment.
eventAdditionalText2	Additional Text2 NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3 Item Name of object shown in eventResourceID.
eventAdditionalText4	Additional Text4 Status value information after status change.
eventAdditionalText5	Additional Text5 Category Categorization of this event. Each category is divided by "|". - Category 1: Module / Function - Category 2: Card / Detail - Category 3: SW Grp / Slot

	- Category 4: Logical
	- Category 5: Type

Contents in above chart are applicable to those objects having "Status" in trap type column found within some of the other charts in this chapter. In my files, the syntaxes of those MIB objects are defined by display strings. Please refer to appendices for the set of my files.

statusChangeOctStr

VARIABLES	Item
eventTotalCount	Total Counter Total trap count since system startup.
eventCount	Count The statusChangeOctStr trap count since system startup.
eventTime	Time Date and time when event occurred. When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Type Event type of trap. Status(2)
eventResourceID	OID setup. Object Identifier (OID) concerned with this event.
eventStatusValueOctStr	Status Value (Octet String) Status value after status change in octetString format.
eventAdditionalText1	Additional Text1 Equipment type is defined here by additional texts. Value varies depending on equipment.
eventAdditionalText2	Additional Text2 NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3 Item Name of object shown in eventResourceID.
eventAdditionalText4	Additional Text4 Status value information after status change.
eventAdditionalText5	Additional Text5 Category Categorization of this event. Each category is divided by "|". - Category 1: Module / Function - Category 2: Card / Detail - Category 3: SW Grp / Slot - Category 4: Logical - Category 5: Type

Contents in above chart are applicable to those objects having "Status" in trap type column found within some of the other charts in this chapter. In my files, the syntaxes of those MIB objects are defined by octet strings. IP addresses are notified in this trap format. Please refer to appendices for the set of my files.

fileDownloadEvent

VARIABLES	Item
eventTotalCount	Total Counter Total trap count since system startup.
eventCount	Count The fileDownloadEvent trap count since system startup.
eventTime	Time Date and time when event occurred. When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Event Type Event type of trap.
eventResourceID	OID setup. Object Identifier (OID) concerned with this event.
eventDownloadModule	Download Module
eventDownloadStatus	Download Status
eventAdditionalText1	Additional Text1 Equipment type is defined here by additional texts. Value varies depending on equipment.
eventAdditionalText2	Additional Text2 NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3 Item Name of object shown in eventResourceID.
eventAdditionalText4	Additional Text4 Status value information after status change.
eventAdditionalText5	Additional Text5 Category Categorization of this event. Each category is divided by "|". - Category 1: Module / Function - Category 2: Card / Detail - Category 3: SW Grp / Slot - Category 4: Logical - Category 5: Type

fileUpdateEvent

VARIABLES	Item
eventTotalCount	Total Counter Total trap count since system startup.
eventCount	Count The fileUpdateEvent trap count since system startup.
eventTime	Time Date and time when event occurred. When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Type Event type of trap.
eventResourceID	OID setup.

	Object Identifier (OID) concerned with this event.
eventUpdateDetail	Update Module Detailed information of Update Module is set.
eventUpdateStatus	Update Status
eventAdditionalText1	Additional Text1 Equipment type is defined here by additional texts. Value varies depending on equipment.
eventAdditionalText2	Additional Text2 NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3 Item Name of object shown in eventResourceID.
eventAdditionalText4	Additional Text4 Status value information after status change.
eventAdditionalText5	Additional Text5 Category Categorization of this event. Each category is divided by "|". - Category 1: Module / Function - Category 2: Card / Detail - Category 3: SW Grp / Slot - Category 4: Logical - Category 5: Type

controlEvent

VARIABLES	Item
eventTotalCount	Total Counter Total trap count since system startup.
eventCount	Count The controlEvent trap count since system startup.
eventTime	Time Date and time when event occurred. When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Type Event type of trap. Control(3)
eventResourceID	OID setup. Object Identifier (OID) concerned with this event.
eventControlValue	Control Value (Integer) Set value on this configuration change in integer format.
eventRecordUserName	Record User Name <User Name who changed configuration>
eventRecordAccessType	Record Access Type Application which is used for this configuration change. 0 : other (include LCT) 1 : SNMP
eventRecordAccessFrom	Record Access From IP Address which invoke this configuration change. For example, IP Address of PC used for LCT or source IP Address of SNMP set packet.

eventAdditionalText1	Additional Text1 Equipment type is defined here by additional texts. Value varies depending on equipment.
eventAdditionalText2	Additional Text2 NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3 Item Name of object shown in eventResourceID.
eventAdditionalText4	Additional Text4 Parameter name that matches status value is found here. Ex) "On" or "off", etc.
eventAdditionalText5	Additional Text5 Category Categorization of this event. Each category is divided by "|". - Category 1: Module / Function - Category 2: Card / Detail - Category 3: SW Grp / Slot - Category 4: Logical - Category 5: Type

Contents in above chart are applicable to those objects having "Control" in trap type column found within some of the other charts in this chapter. In my files, the syntaxes of those MIB objects are defined by integers. Please refer to appendices for the set of my files.

controlEventDspStr

VARIABLES	Item
eventTotalCount	Total Counter Total trap count since system startup.
eventCount	Count The controlEventDspStr trap count since system startup.
eventTime	Time Date and time when event occurred. When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Type Event type of trap. Control(3)
eventResourceID	OID setup. Object Identifier (OID) concerned with this event.
eventControlValueDspStr	Status Value (Display String) Set value on this configuration change in displayString format.
eventRecordUserName	Record User Name <User Name who changed configuration>
eventRecordAccessType	Record Access Type Application which is used for this configuration change. 0 : other (include LCT) 1 : SNMP
eventRecordAccessFrom	Record Access From IP Address which invoke this configuration change. For example,

	IP Address of PC used for LCT or source IP Address of SNMP set packet.
eventAdditionalText1	Additional Text1 Equipment type is defined here by additional texts. Value varies depending on equipment.
eventAdditionalText2	Additional Text2 NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3 Item Name of object shown in eventResourceID.
eventAdditionalText4	Additional Text4 Set value information on this configuration change.
eventAdditionalText5	Additional Text5 Category Categorization of this event. Each category is divided by "|". - Category 1: Module / Function - Category 2: Card / Detail - Category 3: SW Grp / Slot - Category 4: Logical - Category 5: Type

Contents in above chart are applicable to those objects having "Control" in trap type column found within some of the other charts in this chapter. In my files, the syntaxes of those MIB objects are defined by display strings. Please refer to appendices for the set of my files.

controlEventOctStr

VARIABLES	Item
eventTotalCount	Total Counter Total trap count since system startup.
eventCount	Count The controlEventOctStr trap count since system startup.
eventTime	Time Date and time when event occurred. When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Type Event type of trap. Control(3)
eventResourceID	OID setup. Object Identifier (OID) concerned with this event.
eventControlValueOctStr	Status Value (Octet String) Set value on this configuration change in octetString format.
eventRecordUserName	Record User Name <User Name who changed configuration>
eventRecordAccessType	Record Access Type Application which is used for this configuration change. 0 : other (include LCT) 1 : SNMP

eventRecordAccessFrom	Record Access From
	IP Address which invoke this configuration change. For example, IP Address of PC used for LCT or source IP Address of SNMP set packet.
eventAdditionalText1	Additional Text1
	Equipment type is defined here by additional texts. Value varies depending on equipment.
eventAdditionalText2	Additional Text2
	NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3
	Item Name of object shown in eventResourceID.
eventAdditionalText4	Additional Text4
	Set value information on this configuration change.
eventAdditionalText5	Additional Text5
	Category
	Categorization of this event. Each category is divided by "|".
	- Category 1: Module / Function
	- Category 2: Card / Detail
	- Category 3: SW Grp / Slot
	- Category 4: Logical
	- Category 5: Type

Contents in above chart are applicable to those objects having "Control" in trap type column found within some of the other charts in this chapter. In my files, the syntaxes of those MIB objects are defined by octet strings. IP addresses are notified in this trap format. Please refer to appendices for the set of my files.

controlEventUnsigned32

VARIABLES	Item
eventTotalCount	Total Counter
	Total trap count since system startup.
eventCount	Count
	The controlEventUnsigned32 trap count since system startup.
eventTime	Time
	Date and time when event occurred.
	When the TRAP is resent, deci-seconds field (8th octet of the data) is always set to zero.
eventType	Type
	Event type of trap.
	Control(3)
eventResourceID	OID setup.
	Object Identifier (OID) concerned with this event.
eventControlValueUnsigned32	Status Value (Unsigned32)
	Set value on this configuration change in Unsigned32 format.
eventRecordUserName	Record User Name
	<User Name who changed configuration>
eventRecordAccessType	Record Access Type
	Application which is used for this configuration change.

	0 : other(include LCT) 1 : SNMP
eventRecordAccessFrom	Record Access From IP Address which invoke this configuration change. For example, IP Address of PC used for LCT or source IP Address of SNMP set packet.
eventAdditionalText1	Additional Text1 Equipment type is defined here by additional texts. Value varies depending on equipment.
eventAdditionalText2	Additional Text2 NE Name = <Name of NE that you have configured>
eventAdditionalText3	Additional Text3 Item Name of object shown in eventResourceID.
eventAdditionalText4	Additional Text4 Set value information on this configuration change.
eventAdditionalText5	Additional Text5 Category Categorization of this event. Each category is divided by "|". - Category 1: Module / Function - Category 2: Card / Detail - Category 3: SW Grp / Slot - Category 4: Logical - Category 5: Type

Contents in above chart are applicable to those objects having "Control" in trap type column found within some of the other charts in this chapter. In my files, the syntaxes of those MIB objects are defined by gauge values. Please refer to appendices for the set of my files.

2.2.3   alarmStatusGroup

The object ID's in this group defines alarm and status information of the each Module's monitor and control item.

asOduGroup   oduGroupTable

Object Name	Item	Trap Type	Alarm Definition(X.733)	
			Alarm Type	Probable Cause
oduGroupIfIndex	Index Type is "ifindex". Slot Number +1 Range:2-5 Port Number 1:Port1 Path Number The value is fixed at 0.	-	-	-
oduGroupNEAddress	iPASOLINK NE IP Address (used as index of this table)	-	-	-

invOduCardManufacturedDate	Date of manufacture ASCII 8bytes "YYYYMMDD"	-
invOduCardFirmCurrentVersion	Firmware version number ASCII 8bytes	-
invOduCardFirmUncurrentVersion	Firmware version number (Uncureent side) ASCII 8bytes	-
invOduFreqInfoTxStartFrequency	TX Start Frequency [MHz] ASCII 9bytes	-
invOduFreqInfoTxStopFrequency	TX Stop Frequency [MHz] ASCII 9bytes	-
invOduFreqInfoRxStartFrequency	RX Start Frequency [MHz] ASCII 9bytes	-
invOduFreqInfoRxStopFrequency	RX Stop Frequency [MHz]	-

	ASCII 9bytes	
invOduFreqInfoFrequencyStep	Frequency Step [MHz] ASCII 7bytes	-
invOduFreqInfoShiftFrequency	Shift Frequency [MHz] ACSII 8bytes	-
invOduFreqInfoUpperLower	Upper/Lower 1: Upper 2: Lower	-
invOduFreqInfoTxPhase	TX Phase 1:Forward 2:Reverse	-
invOduFreqInfoRxPhase	RX Phase 1:Forward 2:Reverse	-
invOduFreqInfoSubBand	SUB Band ASCII 1byte	-

invUpdateInfoTable

Object Name	Item	Trap Type
invUpdateInfoIndex	Fixed at 1	-
invUpdateInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
invUpdateInfoSummary	When inventory info is updated, this MIB will be sent as the trap with the value "0".	Status

invSfpInfoTable

Object Name	Item	Trap Type
invSfpInfoIfIndex	Index Type is "ifindex". Slot Number +1 Range:1-5 Port Number 1-4:Port1-4 Path Number Fixed at 0	-
invSfpInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
invSfpVendorName	Vendor Name ASCII 16bytes	-
invSfpVendorPn	Part No. ASCII 16bytes	-
invSfpVendorVer	Revision ASCII 4bytes	-
invSfpVendorSn	Vendor Serial No. ASCII 16bytes	-
invSfpType	Type ASCII	-
invSfpManufacturedDate	Manufactured Date ASCII	-
invSfpSupportedWavelength	Wavelength supported by SFP/XFP/SFP+. If the SFP media	-

	type is not optical, this object will show the value '0'.	
invSfpSupportedLinkLength	Link length supported by SFP/XFP/SFP+.	-

invSoftkeyInfoTable

Object Name	Item	Trap Type
invSoftkeyInfoIndex	Fixed at 1	-
invSoftkeyInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
invSoftkeySerialNo	Software Key Serial No.	-

invClk2mInfoTable

Object Name	Item	Trap Type
invClk2mInfoIndex	Fixed at 1	-
invClk2mInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
invClk2mCardName	Card name	-
invClk2mCardCodeNo	Code number	-
invClk2mCardSerialNo	Serial number	-
invClk2mCardManufacturedDate	Date of manufacture ASCII 8bytes "YYYYMMDD"	-
invClk2mCardHardVersion	Hardware version number.	-

invMacAddressInfoTable

Object Name	Item	Trap Type
invMacAddressInfoIfIndex	Index Type is "ifindex". Slot Number +1 Range:1-4 Port Number 1:Port1(MODEM or GbE orMSE) 2-4:Port2-4(GbE) Path Number 0	-
invMacAddressInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
invMacAddress	MAC address	-

invModemParamInfoTable

Object Name	Item	Trap Type
invModemParamInfoIfIndex	Index Type is "ifindex". Slot Number +1 Range:2-5 Port Number 1:Port1	-
invModemParamInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
invModemParamVersion	Modem parameter version.	-

invChassisInfoTable

Object Name	Item	Trap Type
invChassisInfoIndex	Fixed at 1	-
invChassisInfoNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
invChassisName	Name	-
invChassisSerialNo	Serial No.	-
invChassisManufacturedDate	Date of manufacture ASCII 8bytes "YYYYMMDD"	-
invChassisCodeNo	Code No. Code No.	
invChassisHardVersion	H/W Version Hardware Version	

2.2.5   meteringGroup

For more detailed information on "ifindex", please refer to appendix.

meteringTable

Object Name	Item	Trap Type
meteringIfIndex	Index Type is "ifindex". Slot Number +1 Range:2-5 Port Number 1:Port1 Path Number The value is fixed at 0.	-
meteringNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
metSysTxPowerStatus	TX Power Status 0: Invalid(Not obtained or Out of range) 1: valid	-
metSysTxPowerValue	TX Power ([dBm]) "+/-**.*" (ASCII 5bytes) When metSysTxPowerStatus = 0, stored values are variant & negligible.	-
metSysRxLevelStatus	RX Level Status 0: Invalid(Not obtained or Out of range) 1: valid	-
metSysRxLevelValue	Rx Level ([dBm]) "+/-**.*" (ASCII 5bytes) When metSysRxLevelStatus = 0, stored values are variant & negligible.	-
metSysPSVoltageStatus	ODU Power Supply Status 0: Invalid(Not obtained or Out of range) 1: valid	-
metSysPSVoltageValue	ODU Power Supply ([V]) " -** " When metSysPSVoltageStatus = 0, stored values are variant & negligible.	-
metSysTempODUStatus	ODU Temperature MODEM ODU Temperature Status 0:Invalid 1:Valid	-
metSysTempODUValue	ODU Temperature MODEM ODU Temperature	-
metSysBitErrorRateStatus	BER Status FFh: Finalized data 7Fh: Calculating	-
metSysBitErrorRateValue	BER "*.*E-**"	-

meteringFanTable

Object Name	Item	Trap Type
meteringFanSlotIndex	Slot Number +1 Range:7	-
meteringFanNEAddress	iPASOLINK NE IP Address (used as index of this table)	-
meteringFanSpeed1	FAN Speed1 ([rpm]) "****" (ASCII 4bytes) When meteringSfpTxPowerStatus = 0, stored values are variant & negligible.	-
meteringFanSpeed1Status	FAN Speed1 Status 0: Invalid(Not obtained or Out of range) 1: valid	-
meteringFanSpeed2	FAN Speed2 ([rpm]) "****" (ASCII 4bytes) When meteringSfpTxPowerStatus = 0, stored values are variant & negligible.	-
meteringFanSpeed2Status	FAN Speed2 Status 0: Invalid(Not obtained or Out of range) 1: valid	-
meteringFanSpeed3	FAN Speed3 ([rpm]) "****" (ASCII 4bytes) When meteringSfpTxPowerStatus = 0, stored values are variant & negligible.	-
meteringFanSpeed3Status	FAN Speed3 Status 0: Invalid(Not obtained or Out of range) 1: valid	-

2.2.6 pmonGroup

Appendix 1: Index - Rules and Definitions

1. ifIndex: Rules
ifIndex is defined by following Bitmap format.

Bit 31 30 29 28 27 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12 11 10 9 8 7 6 2 4 3 2 1 0

0	Reserve	Slot Number	Port Number	Path Number

Bit location	Field name	Interpretation
31	0	Fixed at 0
30-28 (3bit)	Reserved	Fixed at 0 (Used for cascade connection)

27-23 (5bit)	Slot Number	[0: For LAG/Radio redundancy]
		[For Slots]
		  1: Slot0(Main Card)
		  2: Slot1(Univ.)
		  3: Slot2(Univ.)
		  4: Slot3(Univ.)
		  5: Slot4(Univ.)
		  6: Slot5(PS1)
		  7: Slot6(PS2)
		  8: Slot7(FAN)
		  *For MODEM SW GRP configuration, this will be the lower numbered Slot.
		  * When configuring APS between the cards, only odd numbered slots are valid. When configuring APS within a card, slot number for that card is valid.

22-16 (7bit)	Port Number	[When Slot Number is other than 0]
		  1-4 : Line/Radio Physical ports
		  * When configuring APS within a card, only Port1 is valid. When configuring APS between the cards, Port1 or Port2 whichever applicable is valid.
		  0 : Internal E1 channel of MSE
		  1 : Internal ETH port of MSE
		  1-2 : Internal ETH ports of PTP
		  2 : lowPDV port of MODEM
		[When Slot Number = 0]
		  1-64 : ETH Logical LAG Port
		  65-80 : Radio Logical LAG Port

15-0 (16bit)	Path Number	[For Cross Connect end point (bit15 = 0)]
		  1-16 : E1Channel
		  1-152 : Modem Path
		  1-63 : STM1 VC-12
		  1-64 : MSE E1Channel
		[For OH series (Radio SC/SDH SOH) (bit15 = 1)]
		  32769-32772 : Radio SC 1-4
		  (0x8001-0x8004)
		  32773-32775 : STM1 F1/ E1/ DCCr
		  (0x8005-0x8007)
		  32776 : V11-Radio SC192k connection
		  (0x8008)
		  * Radio SC1-3 (64k*3=192k) signify dynamic allocation.
		  32785-32788 :Radio CLA CH1-4
		  (0x8011-0x8014)
		[0: For Physical port]

2. The combinations of slot and card type on iPASOLINK400.

The combinations of slots on iPASOLINK400 and mounting various cards to Universal Slot are indicated in the following.

1 (Univ.)	2 (Univ.)	3 (Univ.)	4 (Univ.)		7 (FAN)
0 (Main Card)			5 (PS1)	6 (PS2)	

Card	Possible combinations of slot number and card types for Univ.-Slot.
MODEM	1-4
16E1	1-4
STM-1	1-4
GbE	1-4
AUX	3,4
MSE	1-4
PTP	1-4

3. ifIndex: Examples

Below are some examples of IfIndex.

Example 1)
  For MODEM Slot1:
    Slot Number: 2
    Port Number: 1
    Path Number: 0
    Hexadecimal number: 0x1010000
    Decimal number: 16842752

Ex. 2)
  For Port4 of Main Card (GbE):
    Slot Number: 1
    Port Number: 4
    Path Number: 0
    Hexadecimal number: 0x840000
    Decimal number: 8650752

Ex. 3)
  For Port1 of Slot3 (STM-1) Through Mode:
    Slot Number: 4
    Port Number: 1
    Path Number: 0
    Hexadecimal number: 0x2010000
    Decimal number: 33619968

Ex. 4)
  For CH16 of Slot3 (STM-1) Channelized Mode.
    Slot Number: 4
    Port Number: 1
    Path Number: 16
    Hexadecimal number: 0x2010010
    Decimal number: 33619984

Ex. 5)

        For CH08 of Main Card (16E1):

                Slot Number: 1
                Port Number: 1
                Path Number: 8
                Hexadecimal number: 0x810008
                Decimal number: 8454152

Ex. 6)

        For CH08 of Slot3 (16E1):

                Slot Number: 4
                Port Number: 1
                Path Number: 8
                Hexadecimal number: 0x2010008
                Decimal number: 33619976

Appendix 2: IfIndex - List

Slot Number	Port Number	Path Number	Decimal number	Comments
0	1	0	65536	ETH Logical LAG Port1
0	2	0	131072	ETH Logical LAG Port2

ipeFsUpdateFileConfigPartial OBJECT-TYPE
    SYNTAX   OCTET STRING (SIZE(4))
    ACCESS   read-write
    STATUS   mandatory
    DESCRIPTION
        "Specify Equipment Configuration Partial Download pattern.
        If this object is set with ipeFsUpdateFileDetail, the system will
        perform the partial download, otherwise the system will perform
        the normal download. And Partial Download is performed only when
        Equipment Configuration Dowload.

        SYNTAX is 32bit string. The definition of each bit is shown
        below.

        - bit1-4: specify download mode.
         0001 : normal mode
         other value : reserved (system rejects the request)
        - bit5-32: specify the equipment config part. Setting 1 to each
        bit means corresponding config download is activated.
         Bit5 : Equipment Configuration (must set when the normal mode)
         Bit6 : Radio Configuration
         Bit7 : Radio Configuration w/o Radio Frequency
                Bit6 and Bit7 cannot be set to 1 simultaneously.
         Bit8 : E1/STM1 Mapping (must set when Bit6 or Bit7 is activated)
         Bit9 : MODEM Function setting
         Bit10: ETH Function setting
         Bit11: E1/STM1/Cross Connect Setting
         Bit12: PWE Setting
         Bit13: Equipment Clock/Synchronization Setting
         Bit14: Relay-Alarm Mapping
         Bit15: V11/OW Setting
         Bit16: Alarm/AIS Setting
         Bit17: PMON/RMON Setting
         Bit18: AUX Setting

        other: reserved (don't care)

        Example)
         the pattern of downloading the equipment configuration, radio
        configuration, E1/STM1 mapping, ETH Function Setting on normal
        mode.

    SYNTAX   RowStatus { active(1), createAndGo(4), destroy(6) }
    ACCESS   read-write
    STATUS   mandatory
    DESCRIPTION
        "This RowStatus has a status only   active(1).
        You can SET only createAndGo(4) or destroy(6).

        1) how to create
        1.1) SNMPv1/v2c
        To create a new row, you must SET objects indicated below.

        ipeCfgSnmpTrapEntryIndex, ipeCfgSnmpTrapVersion,
        ipeCfgSnmpTrapNotifyType, ipeCfgSnmpTrapTargetAddress,
        ipeCfgSnmpTrapTaergetPort,
        ipeCfgSnmpTrapSecurityName,
        ipeCfgSnmpTrapRowStatus   # Only createAndGo(4).

        It isn't necessary to set ipeCfgSnmpTrapSecurityLevel. When set
        it, the value is checked, so all except for noAuthNoPriv (1) will
        be NG.
        And, the other object is not necessary. Even if it is done SET,
        it is checked the value, but ignored.

        1.2) SNMPv3 (ipeCfgSnmpTrapNotifyType = trap(1))
        ipeCfgSnmpTrapVersion, ipeCfgSnmpTrapNotifyType,

ipeCfgSnmpTrapTargetAddress, ipeCfgSnmpTrapTaergetPort,
ipeCfgSnmpTrapSecurityName,
ipeCfgSnmpTrapRowStatus   # Only createAndGo(4).

Other object is not necessary. Even if it is done SET, it is
checked the value, but ignored.

1.3) SNMPv3 (ipeCfgSnmpTrapNotifyType = inform(2))
To create a new row, you must SET objects indicated below.

ipeCfgSnmpTrapVersion, ipeCfgSnmpTrapNotifyType,
ipeCfgSnmpTrapTargetAddress, ipeCfgSnmpTrapTaergetPort,
ipeCfgSnmpTrapSecurityName,
ipeCfgSnmpTrapSecurityLevel, ipeCfgSnmpTrapEngineId,

                    oamPeeringRemotelyRejected(8), operational(9),
                    nonOperHalfDuplex(10) }
    ACCESS   read-only
    STATUS   mandatory
    DESCRIPTION
        "This value is always disabled(1) if OAM is disabled on the
         interface via the provDot3OamPortEnabled.

         If the link has detected a fault and is transmitting OAMPDUs with
         a link fault indication or the interface is not operational, the
         value is linkFault(2).

         The passiveWait(3) state is returned only by OAM entities in
         passive mode and reflects the state in which the OAM entity is
         waiting to see if the peer device is OA capable. The
         activeSendLocal(4) value is used by active mode trying to
         discover whether the peer has OAM capability but has not yet made
         that determination.

         The state sendLocalAndRemote(5) reflects that the local OA entity
         has discovered the peer but has not yet accepted or rejected the
         configuration of the peer. The local device can, for whatever
         reason, decide that the peer device is unacceptable and decline
         OAM peering. If the local OAM entity rejects the peer OAM entity,
         the state becomes oamPeeringLocallyRejected(7). If the OAM
         peering is allowed by the local device, the state moves to
         sendLocalAndRemoteOk(6).

         If the remote OAM entity rejects the peering, the state becomes
```

- A-397 -

oamPeeringRemotelyRejected(8). When the local OAM entity learns
that both it and the remote OAM entity have accepted the peering,
the state moves to operational(9). Since Ethernet OAM functions
are not designed to work completely over half-duplex interfaces,
the value nonOperHalfDuplex(10) is returned whenever Ethernet OAM
is enabled, but the interface is in half-duplex operation."

asDot3OamPeerFunctionsSupported OBJECT-TYPE
    SYNTAX   OCTET STRING
    ACCESS   read-only
    STATUS   mandatory
    DESCRIPTION
       "The OAM functions supported on the interface. OAM consists of
       separate functionality sets above the basic discovery process.
       This value indicates the capabilities of the peer OAM entity with
       respect to these functions. This value is initialized so all bits
       are clear.

       If unidirectionalSupport(0) is set, the the peer OAM entity
       supports sending OAM frames on the interfaces when the receive
       path is known to be inoperable. If loopbackSupport(1) is set,
       then the peer OAM entity can send and receive OAM loopback
       commands. If eventSupport(2) is set, then the peer OAM entity can
       send and receive event OAMPDUs to signal various error
       conditions. If variableSupport(3) is set, then the peer OAM
       entity can send and receive variable requests to monitor the
       attribute value.

       The capabilities of the OAM peer can be determined from the
       configuration field of the Local Information TLV of the most
       recently received Information OAMPDU with a Local Information
       TLV. All zeros are returned if no Local Information TLV has yet
       been received."
